

USER INTERFACE AND DESIGN

Experiment – 4(b)

Conduct Task Analysis for an App (e.g., Online Shopping) and Document User Flows. Create Corresponding Wireframes using Dia.

AIM:

The aim is to do a detailed task analysis for a food ordering app, write out the full user flow from opening the app to receiving order confirmation, and draw a flowchart in Dia to show it visually.

PROCEDURE:

Tool Used: Dia Diagram Editor — Download from <http://dia-installer.de/>

1. Download and install Dia.
2. Create a new flowchart diagram.
3. Add shapes for each screen of the food ordering app.
4. Connect shapes with arrows in order.
5. Label each shape with its screen name.
6. Save the diagram.

PART 1: TASK ANALYSIS AND USER FLOW

Task analysis breaks down what a user does step by step to reach their goal. For a food ordering app, the steps are:

1. Open the app
2. View the home page
3. Browse restaurants
4. Select a restaurant
5. Browse the menu
6. Select a food item
7. Add item to cart
8. Go to cart
9. Proceed to checkout
10. Make payment
11. Receive order confirmation

USER FLOW:

Home → Restaurants → Menu → Food Item → Cart → Checkout → Payment → Order Confirmation

Each screen has a single clear purpose, keeping the app simple and easy to follow. The linear flow matches how people order food in real life — browse, pick, confirm, pay.

PART 2: FLOWCHART DIAGRAM ON DIA

The flowchart below was made in Dia. Each screen is a labeled rectangle, and arrows between them show the order of navigation. The whole flow goes from left to right.

Fig 1: Flowchart in Dia — Home → Restaurants → Menu → Food Items → Cart → Checkout → Payment → Order Confirmation

ANALYSIS:

- The task analysis clearly lists all 11 steps needed to complete an order.
- The linear flow makes the app easy to learn and reduces confusion.
- Each screen serves one purpose, keeping things focused.
- The Dia flowchart gives a clear visual of the entire user journey.
- Placing order confirmation right after payment gives users instant positive feedback.
