

USER INTERFACE AND DESIGN

Experiment – 5(a)

Simulation of UI Design Lifecycle using RAD Model with Axure RP

AIM:

The aim is to go through the four stages of the RAD (Rapid Application Development) model to design and build an interactive poster browsing app called POSTERX using Axure RP.

TOOLS USED:

Axure RP, Computer System

THEORY:

RAD (Rapid Application Development) is a method where you build and test things quickly in cycles. Instead of planning everything at the start, you keep improving the design through user feedback. It has four phases: Requirements Planning, User Design, Construction, and Cutover.

PROCEDURE:

Phase 1 – Requirements Planning: Identified the four main features of POSTERX: a landing page, a gallery to browse posters, a download screen, and a thank-you confirmation page.

Phase 2 – User Design: Created wireframes for all four screens in Axure RP and added OnClick interactions to link the pages.

Phase 3 – Construction: Built the interactive prototype, linked all screens, and tested using the Axure RP preview.

Phase 4 – Cutover: Finalized all screens and exported the prototype.

SCREEN DESIGNS:

Screen 1: Landing Page

The landing page is the entry point of the app. It shows the brand name POSTERX in big bold text, the tagline "One Click. Endless Posters", and a "Click to Browse" button that takes the user to the gallery.

Fig 1: POSTERX Landing Page

Screen 2: Browse Posters Page

The browse page shows 10 poster thumbnails in a 2x5 grid. Each poster has a title, creator name, and a checkbox to select it. A "Done >>" button at the top takes the user to the download screen once they have made their selection.

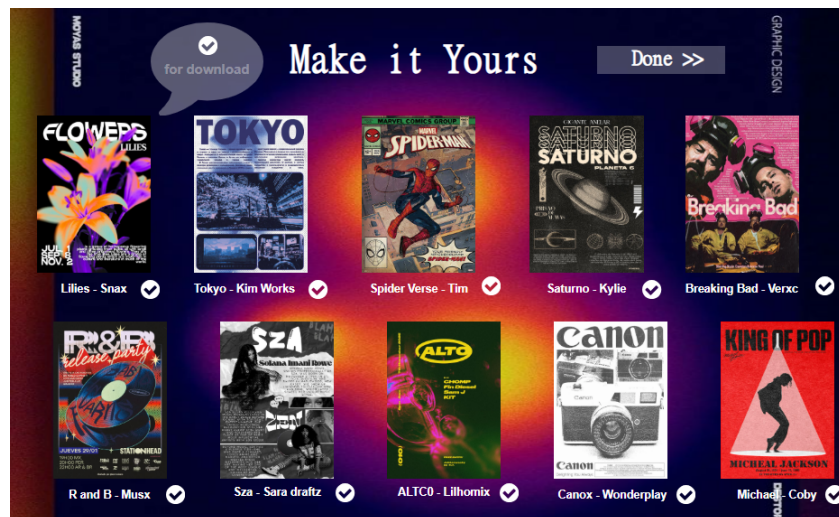

Fig 2: Browse Posters Page – 2x5 Grid Gallery

Screen 3: Download in Process

This screen shows a spinning icon and the text "Download in Process..." to tell the user that their poster is being downloaded. The background uses a heatmap-style design to make the waiting feel active. After a few seconds, it automatically moves to the thank-you page.

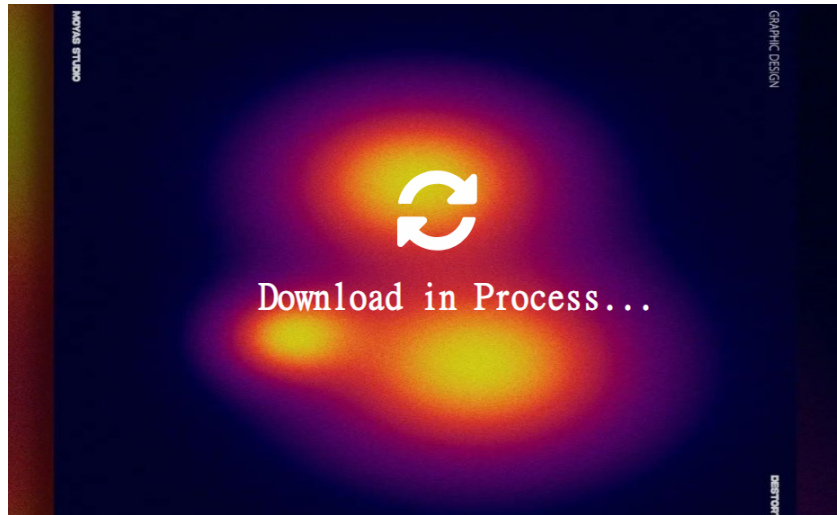

Fig 3: Download Screen – Loading State

Screen 4: Thank You Page

The thank-you page is the final screen. It says "Thank yewww / For choosing us" and uses the same cosmic background as the landing page, giving the app a neat circular feel. There are no buttons here — the journey is complete.

Fig 4: Thank You Page – Final Confirmation

RESULT:

The RAD lifecycle was successfully simulated. All four phases were completed and the POSTERX prototype was built with four linked interactive screens.

ANALYSIS:

- The four-screen flow keeps the app simple and easy to use.
- The same background on the landing and thank-you pages gives the app visual consistency.
- The download screen's heatmap effect makes waiting feel interesting instead of boring.
- The checkbox grid on the browse page is familiar and needs no explanation.

- RAD allowed quick design and testing without a long planning phase.
