

USER INTERFACE AND DESIGN

Experiment – 6

Experiment with different layouts and colour schemes for an app using GIMP and evaluate user feedback on aesthetics and usability.

AIM:

The aim is to design the same mobile app layout in five different colour themes using GIMP, share them with users, and collect feedback to see which colour scheme works best for usability and looks.

PROCEDURE:

Tool Used: GIMP — <https://www.gimp.org/>

1. Install GIMP and create a new canvas of 1080x1920 pixels.
2. Design a base layout with a header, search bar, quick access icons, item cards, and footer navigation.
3. Organise all elements in separate layers.
4. Duplicate the base layout five times and apply different colour themes to each.
5. Export each version as a PNG and share with users via a Google Form.
6. Collect feedback and improve based on responses.

OUTPUT – COLOUR SCHEME VARIATIONS:

Figure 1: Blue Theme

Blue is used for the header, icons, and buttons. It gives the app a professional and trustworthy feel. Users rated this theme highest for readability and clean design.

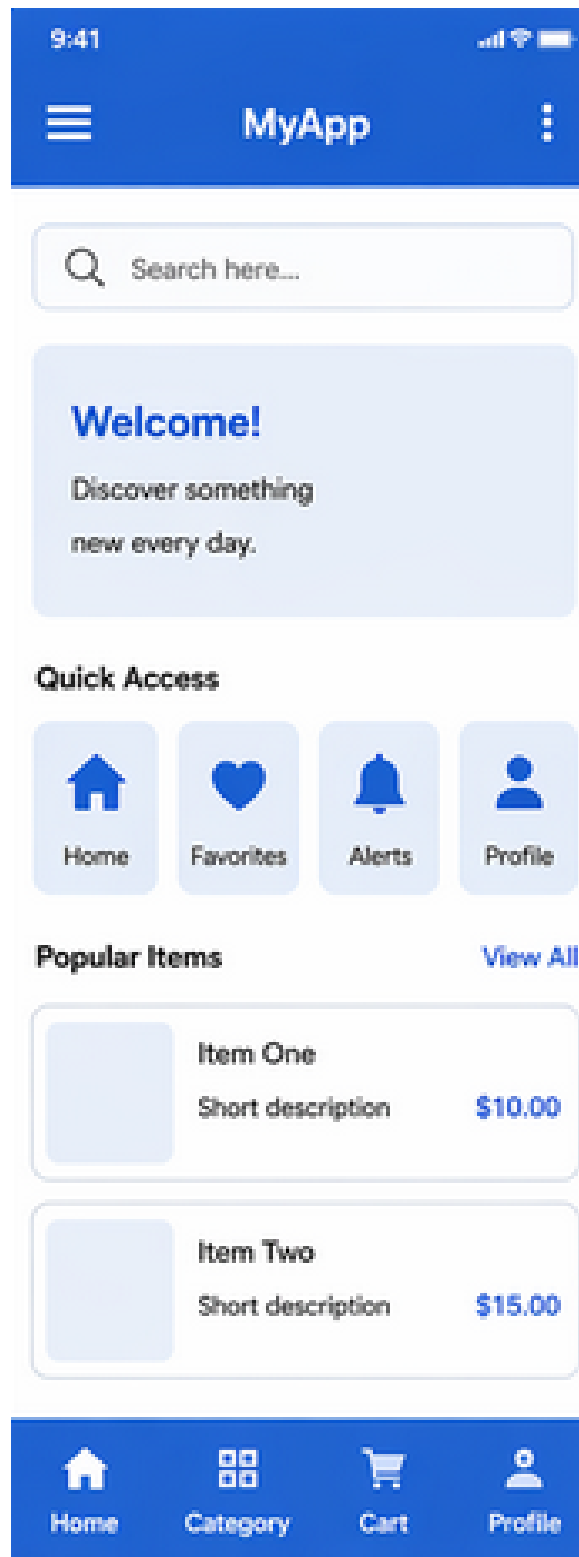

Figure 1: Blue Theme Layout

Figure 2: Green Theme

Green is used as the main accent colour. It feels calm and natural, making the app look friendly. Users liked it for long-term use but said it does not feel as premium as blue.

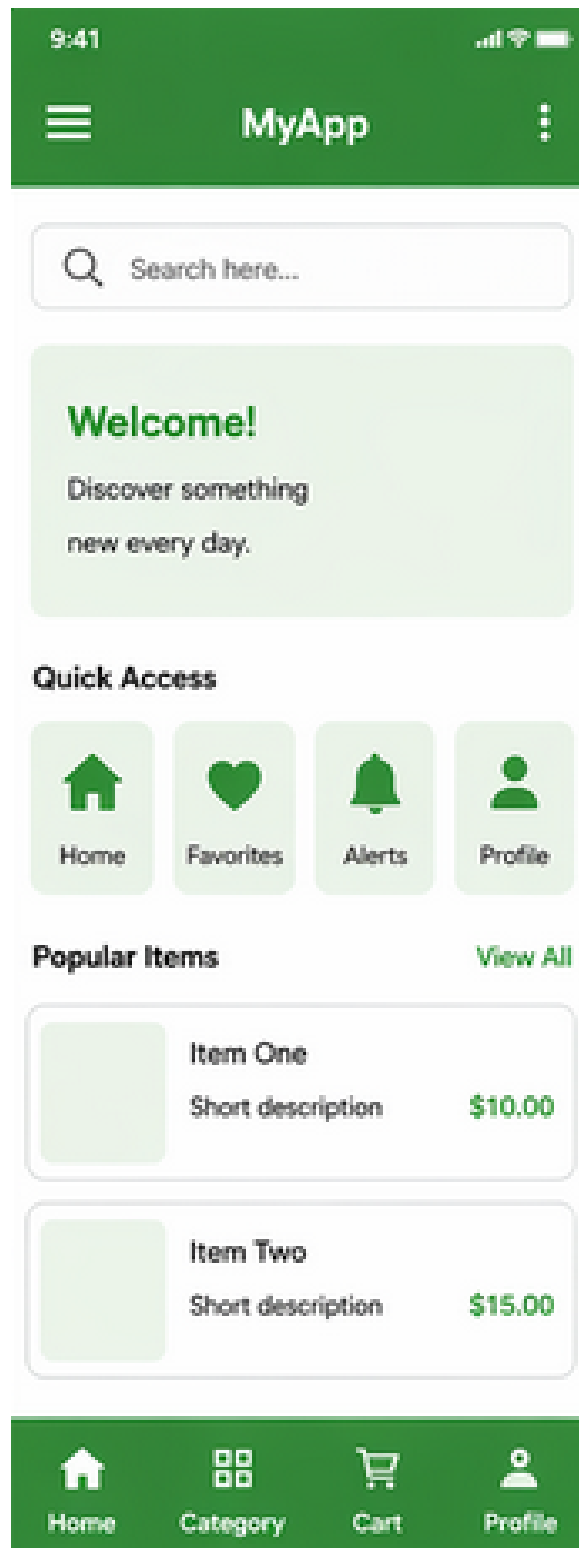

Figure 2: Green Theme Layout

Figure 3: Purple Theme

Purple is applied to the header, icons, and interactive elements. It looks modern and creative. Some users found it distinctive, though a few felt it was less intuitive than blue or green.

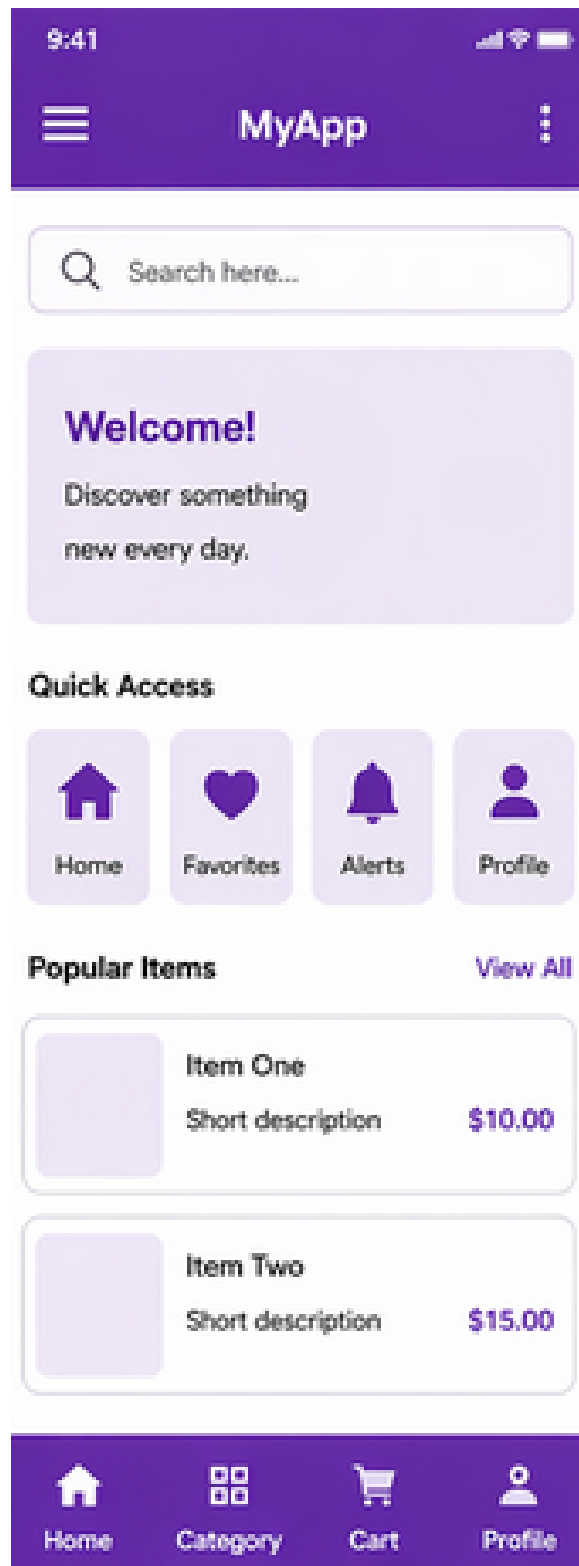

Figure 3: Purple Theme Layout

Figure 4: Orange Theme

Orange gives the app an energetic and warm feel. It works well for food or retail apps. A few users mentioned that too much orange can feel tiring after a while.

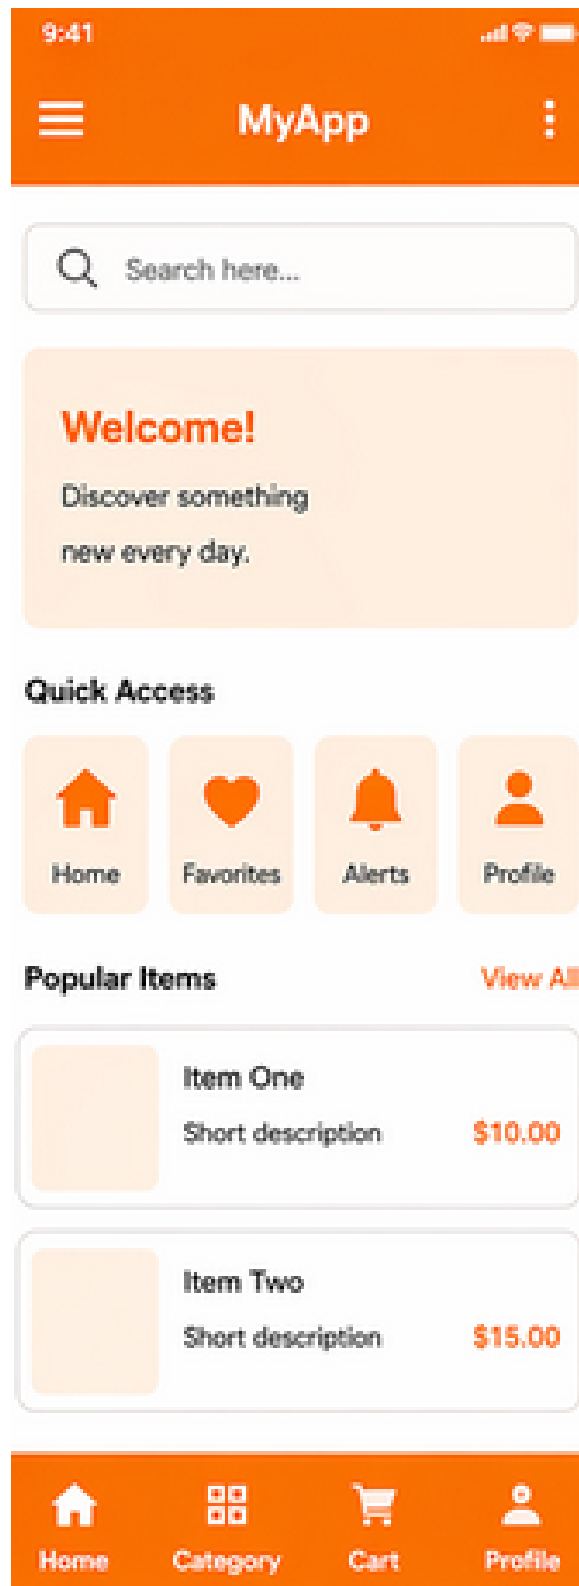

Figure 4: Orange Theme Layout

Figure 5: Dark Theme

The dark theme uses a near-black background with light text. It is easy on the eyes in low light and gives a sleek, modern look. Users ranked this second overall after the blue theme.

Figure 6: All Five Themes Side by Side

The comparison below shows all five themes together to highlight how colour changes the feel of the same layout.

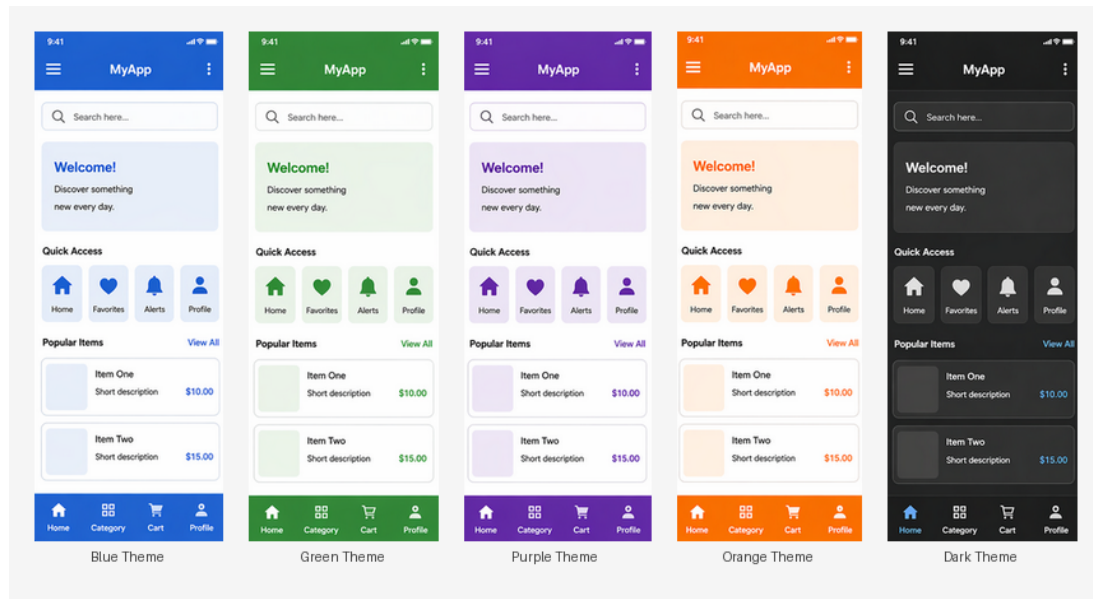

Figure 6: Comparison of All Five Layout Themes

RESULT:

All five colour themes were created and shared with users. The Blue Theme was liked the most for its professional look and readability. The Dark Theme came second, especially for night-time use.

ANALYSIS:

- Blue was the most preferred theme — it looks clean and trustworthy.
- Dark theme was best for users who use apps at night.
- Orange had the most energy but could cause visual fatigue.
- Colour choice strongly affects how users feel about an app.
- GIMP is a good free tool for creating and testing UI mockups.
