

USER INTERFACE AND DESIGN

Experiment – 8(b)

Create storyboards to represent the user flow for a mobile food delivery application using OpenBoard.

AIM:

The aim is to create a storyboard using OpenBoard that shows the complete user journey of a food delivery app — from the home screen all the way to the order confirmation screen.

PROCEDURE:

Tool Used: OpenBoard — <https://openboard.ch/download.en.html>

1. Identify the five key screens: Home, Menu, Cart, Checkout, and Order Confirmation.
2. Open OpenBoard and set up a landscape canvas.
3. Draw five rectangular frames, one for each screen.
4. Sketch the UI elements inside each frame.
5. Arrange frames left to right and connect them with arrows.
6. Add a flow summary bar at the bottom.

SCREEN STORYBOARDS:

Figure 1: Home Screen

The home screen is where the user starts. It has a search bar at the top, food category buttons (Pizza, Burger, Chinese), and a featured restaurant tile below. Users can search directly or browse by category.

Figure 1: Home Screen — Food Delivery Storyboard

Figure 2: Menu Screen

After selecting a restaurant, the user sees the menu. It lists food items like Margherita Pizza, Veg Burger, and French Fries with prices and "Add to Cart" buttons. A back button at the top lets the user return to the previous screen.

Figure 2: Menu Screen — Food Delivery Storyboard

Figure 3: Cart Screen

The cart shows all selected items with their prices and quantity controls (minus/plus buttons). A total amount is shown at the bottom, and a Checkout button takes the user to the next step.

Figure 3: Cart Screen — Food Delivery Storyboard

Figure 4: Checkout Screen

The checkout screen collects delivery details — name, address, phone number — and lets the user pick a payment method (Cash, UPI, or Card). A "Place Order" button submits the order.

The image shows a mobile app checkout screen. At the top, there is a blue circle with the number '4' inside, followed by the word 'CHECKOUT' in bold, uppercase letters. Below this is a large, rounded rectangular container. Inside the container, the text 'Delivery Address' is at the top. Underneath it are three stacked rectangular input fields labeled 'Full Name', 'Address', and 'Phone Number'. To the left of the 'Phone Number' field is a right-pointing arrow, and to the right is a horizontal line. Below the input fields, the text 'Payment Method' is displayed. Underneath it are three radio button options: 'Cash on Delivery', 'UPI', and 'Card'. At the bottom of the container is a rectangular button labeled 'Place Order'.

Figure 4: Checkout Screen — Food Delivery Storyboard

Figure 5: Order Confirmation Screen

The confirmation screen shows a green checkmark, the order ID, and the estimated delivery time. A "Track Order" button is included. This screen closes the loop and makes the user feel confident their order went through.

Figure 5: Order Confirmation — Food Delivery Storyboard

Figure 6: Complete Storyboard Flow

The complete storyboard shows all five screens arranged left to right on one OpenBoard canvas, connected by arrows showing the navigation flow.

Figure 6: Complete Storyboard Flow — HOME → MENU → CART → CHECKOUT → CONFIRMATION

RESULT:

A complete storyboard for the food delivery app was created using OpenBoard, covering all five screens with UI elements and directional arrows to show the navigation flow.

CONCLUSION:

Storyboards help visualize the user journey before any actual development starts. OpenBoard made it easy to draw and connect screen frames. The linear five-step flow for the food delivery app keeps things simple and matches the way people naturally think about ordering food.
